Overview

Each asset is a single specimen drawn as a straight-on elevation and cleanly isolated on a transparent background, ready to drop into a drawing. Two layers are supplied for every asset: a transparent **cut-out** (<name> – nobg . png) at the top of each folder, and the original **white-background** render inside a white background/ sub-folder. Assets are organised by habit (evergreen / deciduous) and type (tree / shrub); every Australian native is additionally mirrored into a dedicated folder.

Evergreen trees	36
Deciduous trees	29
Evergreen shrubs	29
Deciduous shrubs	9
Australian natives (mirrored)	42

Planting selection is weighted to Sydney / Australian landscape practice. A small number of items are seasonal or age variations of the same species (e.g. *jacaranda* — *young*, *olive* — *ancient gnarled*) to give specification choice.
